Learn CSS

CSS stands for Cascading Style Sheets. It was created during the 90's. It's purpose is to add style to HTML tags. With CSS, you can change colors, sizes and even create animations !

```
h1 {
    color : #fff;
    font-size: 25px;
    font-weight: 700;
    }
```

Two tools are pretty important in CSS : flex and grid.
