

</> Learn HTML

HTML stands for Hyper Text Markup Language. It allows you to describe the structure of a web page.

```
<!DOCTYPE html>
<html lang="en">
<head> <meta charset="UTF-8">
  <meta http-equiv="X-UA-Compatible" content="IE=edge">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Mon titre</title>
</head>
<body>
</body>
</html>
```

This is what HTML looks like. It's important to notice that the code is divided in two different parts :

- <head> : this is a container for metadata. Inside you can define a title for the document, where to find its stylesheet, its script etc
- <body> : this is our web page content.

Tag examples :

- <h1></h1>, <h2></h2>, ... <h6></h6> : titles from more important to least important
- : embed images
- <a> : embed links
- <p> : paragraphs
- : gives strong importance to text and displays it in bold
- <i> : italic
- : italic
-
 : insert a break
- > : unordered list
- : ordered list
- : list element
